Tools of Trade

- Javascript (ES6+)
- Node.js
- React & Redux
- Ruby on Rails
- Python
- Linux, Dockers and AWS

Technology Stack Distribution

Notable Years

I'm a Full Stack developer, and passionate about programming. I'm always ready to get new sources of ideas and skills, I love discussing technologies and collaborating with skilled individuals and groups. I worked for 6 years in Trusteer (IBM Security), and made a big journey, working and integrating with numerous local and remote teams in order to deliver high quality tools to our customers.

💼 Web Architect & Team Lead

2018-2020 - Trusteer (IBM Security)

Designed Trustboard our next-generation risks and reporting management application from the ground up, with the help of 5 other engineers, using modern technologies such as **React**, **Node.js** on top of **Elastic Search** and **Couchbase**. One of Trusteer's most focused projects.

🧩 Engineered a large scale, multi purpose framework for building **micro services**. Using **Domain Driven Development** methodology.
📌 During my role as a team lead, I also provided technological consultancy to other teams in my group.

💼 Full Stack Developer

2014-2018 - Trusteer (IBM Security)

Developed Trusteer's risks and reporting management application (TMA) using **Ruby on Rails** and Sencha **ExtJS** (4.2) frameworks on top of **MySQL** and **Couchbase** as main data sources.

🔑 **OpenID** implementation for integration with IBMid - requested by Bank of America.
🕐 Scheduled tasks management subsystem.
🛡 Taking high **software security** standards in mind.

🎓 Bsc in Computer Science

2010-2013 - Ben Gurion University

Bachelor of Science from the department of Computer Science
